Branch: REC

Department: I CSE FC

Batch: 2028

Degree: B.E - CSE

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
  struct Node* n=(struct Node*)malloc(sizeof(struct Node));
  n->item=item:
  n->next=NULL;
  n->prev=NULL;
  if (*head==NULL) *head=n;
  else{
    struct Node* temp=*head;
    while(temp->next!=NULL) temp=temp->next;
```

```
240701222
        temp->next=n;
        n->prev=temp;
    void displayForward(struct Node* head) {
      struct Node* temp=head;
      while(temp!=NULL){
        printf("%c ",temp->item);
        temp=temp->next;
      }
      printf("\n");
    void displayBackward(struct Node* tail) {
      struct Node* temp=tail;
      while(temp->next!=NULL) temp=temp->next;
      while(temp!=NULL){
        printf("%c ",temp->item);
        temp=temp->prev;
      }
      printf("\n");
    void freePlaylist(struct Node* head) {
      struct Node* temp;
      while(head!=NULL){
        temp=head;
        head=head->next;
        free(temp);
    int main() {
      struct Node* playlist = NULL;
      char item;
      while (1) {
         scanf(" %c", &item);
break;
}
insertAtEnd(&playlist, item);
}
        if (item == '-') {
```

```
struct Node* tail = playlist;
while (tail->next != NULL) {
  tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;

Status: Correct

Marks: 10/10
